04-12-1999

PATEL RONAK

CLOUD & DEVOPS ENGINEER

A highly motivated and technically proficient information technology graduate with hands-on experience in DevOps practices, cloud technologies, and containerization. Skilled in using tools like Git, Docker, Jenkins, and AWS to automate processes and improve system reliability. Seeking an entry-level position to apply my skills and learn in a dynamic DevOps environment.

Address
Ahmedabad,Gujrat

Education

2017-2021
B.E in Information Technology
Kalol Institute of Technology,

2022-2023
Completed Professional Training In
Redhat Linux, Ansible, Aws cloud.

Soft Skills

- Problem - Solving
- Strong Communication
- Team Collaboration
- Quick learner
- Time Management

Language

- **Gujrati**
- **Hindi**
- **English**

TECHNICAL SKILLS

- DevOps Tools: Jenkins, Kubernetes, Docker, Ansible, Terraform, Maven,
- Cloud Services: AWS, GCP
- Containerization &Orchestration: Docker, Kubernetes
- Automation Tools: Ansible,Terraform
- CI/CD: Jenkins, GitLab CI
- Monitoring: Grafana
- Version Control: Git, GitHub
- Operating System: Linux (Redhat,Ubuntu), Windows
- Programming Language: HTML5, CSS3, Python(Django)
- DataBase: MySql, MongoDB

KEY ABILITIES

1. Continuous Integration and Continuous Delivery (CI/CD):

Jenkins, GitLab CI/CD:
Automating build, test, and deployment processes.
Configuring pipelines for parallel execution and integration with version control systems.

2. Version Control:

Git, GitHub:
Managing repositories and branching strategies (Git Flow).
Resolving merge conflicts and conducting code reviews.
Enabling automated triggers for builds and deployments.

3. Containerization:

Docker:
Creating and managing containerized applications.
Writing optimized Docker files to minimize image size.
Managing container networks and volumes for interconnectivity.

Kubernetes:
Deploying and managing workloads using Helm charts
Configuring Kubernetes clusters, scaling pods, and managing resource allocations.
Implementing RBAC policies and namespace isolation for security.

4. Infrastructure as Code (IaC):

Terraform:
Writing reusable modules to manage infrastructure across cloud platforms.
Automating provisioning and managing state files for consistent deployments.

Ansible:
Writing playbooks for configuration management and application deployment.
Automating patch management and scaling operations.

5. Cloud Platforms:

AWS, GCP:
Designing and provisioning cloud-native architectures using tool like AWS CloudFormation.
Implementing auto-scaling, load balancing, and disaster recovery strategies.
Monitoring costs and optimizing usage with tagging and policies.

6. Monitoring and Logging:

Prometheus and Grafana:
Setting up custom alerts for system metrics (CPU, Memory, Disk I/O).
Creating interactive dashboards for performance monitoring.

7. Scripting and Automation:

YAML:
Writing scripts for automating routine DevOps tasks like backups and log rotations.
Automating server setup and application deployments with configuration files.

PROJECTS

1. CI/CD Pipeline Implementation with Jenkins and GitHub

Technologies:- Jenkins, GitHub, AWS, Docker
- Created a simple CI/CD pipeline using Jenkins for automated testing and deployment.
- Integrated GitHub with Jenkins to trigger builds on code commits.
- Deployed a sample web application on AWS EC2 using Docker.

2. Dockerizing a Websites.

Technologies:- Docker, Node.js & Python(Django).
- Containerized a Python(Django) Website using Docker for environment consistency
- Containerized a Node.js application using Docker for environment consistency.
- Configured Docker Compose for multi-container management.

3. DevSecOps CI/CD Pipeline Project .

Technologies:- Jenkins, Docker, Kubernetes, SonarQube, and Trivy.
- Built a complete DevSecOps pipeline to automate build, test, security scanning, and deployment of a web application.
- Integrated Git, Jenkins, SonarQube, Trivy, Docker, and Kubernetes for secure CI/CD workflow.
- Implemented Static Application Security Testing (SAST) using SonarQube.
- Performed container vulnerability scanning using Trivy before deployment.
- Automated Docker image build and pushed images to Docker Hub.
- Deployed containerized application on Kubernetes cluster with auto-scaling.

EDUCATION

(July,2017 - sept 2021)

- Bachelor of Engineering in Information Technology (CGPA:8.49) | (July,2017 - sept 2021)
- Kalol Institute of Technology & Research Center, Kalol | Graduated: January 2022,
- Relevant Coursework: Cloud Computing, Operating Systems, DevOps Practices,

(Jun,2022 - Jun 2023)

- Completed Professional Training In
- Redhat Linux, Ansible Automation, Aws cloud
- At Grass Solution PVT.LTD.
